1 SpeechSkimmer: a system for interactively skimming recorded speech

Barry Arons
March 1997 **ACM Transactions on Computer-Human Interaction (TOCHI)**, Volume 4 Issue 1
Publisher: ACM Press

Full text available: pdf(1.03 MB) Additional Information: full citation, abstract, references, citings, index terms, review

Listening to a speech recording is much more difficult than visually scanning a document because of the transient and temporal nature of audio. Audio recordings capture the richness of speech, yet it is difficult to directly browse the stored information. This article describes techniques for structuring, filtering, and presenting recorded speech, allowing a user to navigate and interactively find information in the audio domain. This article describes the SpeechSkimmer system for interacti ...

Keywords: audio browsing, interactive listening, nonspeech audio, speech as data, speech skimming, speech user interfaces, time compression

2 LiteMinutes: an Internet-based system for multimedia meeting minutes

Patrick Chiu, John Boreczky, Andreas Girgensohn, Don Kimber
April 2001 **Proceedings of the 10th international conference on World Wide Web**
Publisher: ACM Press

Full text available: pdf(1.68 MB) Additional Information: full citation, references, index terms

Keywords: hypermedia systems, meeting capture, meeting support systems, multimedia applications, note taking, video applications

3 Experiences in developing a typical web/database application

J.-P. Rosen
December 2003 **ACM SIGAda Ada Letters , Proceedings of the 2003 annual ACM SIGAda international conference on Ada: the engineering of correct and reliable software for real-time & distributed systems using ada and related technologies SigAda '03**, Volume XXIV Issue 1
Publisher: ACM Press

Full text available: pdf(337.61 KB) Additional Information: full citation, abstract, references, index terms

This paper describes Gesem, an application developed internally by Adalog for managing the registration to its training sessions. The application features a Web interface that uses AWS, an interface to the MySQL DBMS (over ODBC), and a local interface that uses GTK. The project explored various solutions, and identified a number of design patterns that made the development of new functionalities very straightforward. The experience gained in this project can be reused for any development in a si ...

Keywords: AWS, Ada, GTK, data-base, design patterns, web server

4 WebStickers: using physical tokens to access, manage and share bookmarks to the Web

Peter Ljungstrand, Johan Redström, Lars Erik Holmquist

April 2000 **Proceedings of DARE 2000 on Designing augmented reality environments**

Publisher: ACM Press

Full text available: pdf(2.35 MB) Additional Information: full citation, abstract, references, citings, index terms

In the *WebStickers* system, where barcode stickers may be attached to physical objects making them act as bookmarks to the worldwide web in a convenient way to the user. Using readily available technology, i.e., standard barcode readers and adhesive stickers, WebStickers enable users to take advantage of their physical environment when organizing and sharing bookmarks. Starting from a user-centered rather than technology-driven point of view, we discuss how the affordances of physical t ...

Keywords: barcodes, bookmark management, information workspaces, physical tokens, tangible interfaces, world wide Web, world wide web

5 Tools: Role-based control of shared application views

Lior Berry, Lyn Bartram, Kellogg S. Booth

October 2005 **Proceedings of the 18th annual ACM symposium on User interface software and technology UIST '05**

Publisher: ACM Press

Full text available: pdf(745.66 KB) Additional Information: full citation, abstract, references, index terms

Collaboration often relies on all group members having a shared view of a single-user application. A common situation is a single active presenter sharing a live view of her workstation screen with a passive audience, using simple hardware-based video signal projection onto a large screen or simple bitmap-based sharing protocols. This offers simplicity and some advantages over more sophisticated software-based replication solutions, but everyone has the exact same view of the application. This c ...

Keywords: CSCW, application, bitmap, policy, privacy, role, sharing, verbosity, view

6 Integrating tools and tasks: UMEA: translating interaction histories into project contexts

Victor Kaptelinin

April 2003 **Proceedings of the SIGCHI conference on Human factors in computing systems**

Publisher: ACM Press

Full text available: pdf(232.45 KB) Additional Information: full citation, abstract, references, citings, index terms

Virtual environments based on the desktop metaphor provide limited support for creating and managing project-specific work contexts. The paper discusses existing approaches to supporting higher-level user activities and presents a system named UMEA (User-Monitoring Environment for Activities). The design of the system is informed by activity theory. The system: (a) organizes resources into project-related pools consisting of documents, folders, URLs, and contacts, (b) monitors user activities, (...

Keywords: activity theory, interaction histories

7 Browsing the WWW by interacting with a textual virtual environment—a framework for experimenting with navigational metaphors

Andreas Dieberger

March 1996 **Proceedings of the the seventh ACM conference on Hypertext**

Publisher: ACM Press

Full text available: pdf(1.28 MB) Additional Information: full citation, references, citings, index terms

Keywords: WWW, collaborative navigation, metaphors, navigation, spatial hypertext

8 A confederation of tools for capturing and accessing collaborative activity

Scott Minneman, Steve Harrison, Bill Janssen, Gordon Kurtenbach, Thomas Moran, Ian Smith, Bill van Melle

January 1995 **Proceedings of the third ACM international conference on Multimedia**

Publisher: ACM Press

Full text available: htm(73.96 KB) Additional Information: full citation, references, citings, index terms

Keywords: CSCW, activity capture, content-and content-based indexing and retrieval, digital audio and video, distributed multimedia systems, real-time indexing, usability, user interfaces

9 Supporting activities: Proactive support for the organization of shared workspaces using activity patterns and content analysis

Wolfgang Prinz, Baber Zaman

November 2005 **Proceedings of the 2005 international ACM SIGGROUP conference on Supporting group work GROUP '05**

Publisher: ACM Press

Full text available: pdf(1.10 MB) Additional Information: full citation, abstract, references, index terms

Shared workspace systems provide virtual places for self-organized and semi-structured cooperation between local and distributed team members. These cooperation systems have been adopted by a large community over the past years and the volume of managed information is increasing rapidly. However, a problem that occurs frequently is the missing user support for the workspace organization and a lack of assistance finding the right place for storing new documents and contributions. This often resul ...
